

PRIYA PAJJURI

Java Full Stack Developer

9398861476 | priyapajjuri@gmail.com | linkedin.com/in/priya-pajjuri | Jangaon, Telangana

PROFESSIONAL SUMMARY

Java Full Stack Developer with **3 internship experiences** and 2 team-led projects, delivering end-to-end web applications using **Spring Boot, Angular, Hibernate**, and **SQL**. Proven ability to architect secure REST APIs, implement JWT authentication, and manage full project lifecycles from database schema to responsive UI. Strong academic foundation (CGPA 8.63) with consistent record of leading teams to deliver quality software on schedule.

TECHNICAL SKILLS

Languages	Java, Python, C, C++
Frontend	HTML5, CSS3, JavaScript, Angular, Responsive UI Design
Backend	Spring Boot, Hibernate, Microservices, REST APIs, Core Java, JDBC
Database	SQL, Relational Database Design, CRUD Operations

PROFESSIONAL EXPERIENCE

Full Stack Java Developer

2023

She Arise 2.0 — CSR Initiative Program

- Built and deployed full stack applications using **Spring Boot** and **Angular**, implementing RESTful API architecture aligned with enterprise Java standards.
- Engineered **JWT-based authentication and RBAC** for multi-user environments, securing all application endpoints and enforcing access policies.
- Developed modular RESTful CRUD APIs, integrating Angular SPA frontend with Spring Boot backend and relational SQL database.
- Collaborated with cross-functional teams to deliver sprint milestones in a structured software delivery workflow.

Java Developer Intern

2023

Codsoft

- Developed and unit-tested backend REST APIs using **Core Java** and **JDBC**, handling structured data exchange between application and SQL database layers.
- Designed and optimised **SQL queries** (SELECT, JOIN, aggregation) for efficient data retrieval and manipulation.
- Diagnosed and resolved backend-database integration bugs, improving data consistency and system reliability.

Web Development Intern

2022

Internshala

- Built responsive web pages using **HTML**, **HTML5**, and **CSS** with basic **JavaScript** for interactivity, ensuring consistent layout across devices.
- Gained foundational experience in frontend structure and styling through a structured web development curriculum.

EDUCATION

Institution	Qualification	Year	Grade / Score
Christu Jyothi Institute of Technology & Science (JNTUH)	B.Tech — Computer Science & Engineering	2020–2024	8.63 CGPA
Sri Gayatri Junior College	Intermediate (MPC)	2018–2020	885 / 1000
St Paul's High School	SSC	2018	9.0 GPA

PROJECTS

Technical Blog Platform

2023 – 2024

Java Full Stack | Team Lead | Spring Boot · Angular · SQL · Hibernate · JWT

Designed and built a fully functional blogging platform from the ground up, covering every layer of the application stack — from relational database schema design to a responsive Angular frontend. The platform supports multiple user roles (admin and author) with secure access enforced through JWT-based authentication and Role-Based Access Control. Backend services were developed using Spring Boot and Hibernate ORM, exposing RESTful CRUD APIs for post management, user profiles, and session handling. Led a development team, managing task allocation and code reviews to deliver the project on schedule. Build and dependency management was fully automated using Maven and npm.

- Full stack architecture: Spring Boot backend + Angular SPA frontend + SQL database
- JWT authentication and RBAC for secure, role-based multi-user access
- RESTful CRUD APIs for posts, profiles, and session management via Hibernate ORM
- Team lead: task distribution, code reviews, and on-time delivery
- Build pipeline automated end-to-end with Maven and npm

Sorting Algorithms Visualiser

2022 – 2023

Python | Team Lead | Matplotlib · Tkinter

Engineered an interactive desktop application that visualises the step-by-step execution of 5 sorting algorithms in real time, including Bubble Sort, Merge Sort, Quick Sort, Insertion Sort, and Selection Sort. The tool was designed for academic use to help students understand algorithmic efficiency through animated graphical feedback. Users can configure the algorithm type, dataset size, and animation speed, making it flexible for both demonstration and self-study. Led a two-person team through development, coordinating feature implementation and final integration.

- Real-time animation of 5 sorting algorithms using Matplotlib and Tkinter
- User-configurable parameters: algorithm type, dataset size, animation speed
- Designed for academic use to enhance algorithm comprehension
- Team lead: coordinated feature development and integration

CORE COMPETENCIES

Technical Leadership	Team Collaboration	Effective Communication	Problem Solving & Analytical Thinking	Adaptability Across Tech Stacks	Attention to Detail	Active Listening
